ProPlay[®]-Sport

Guarantee for top performances

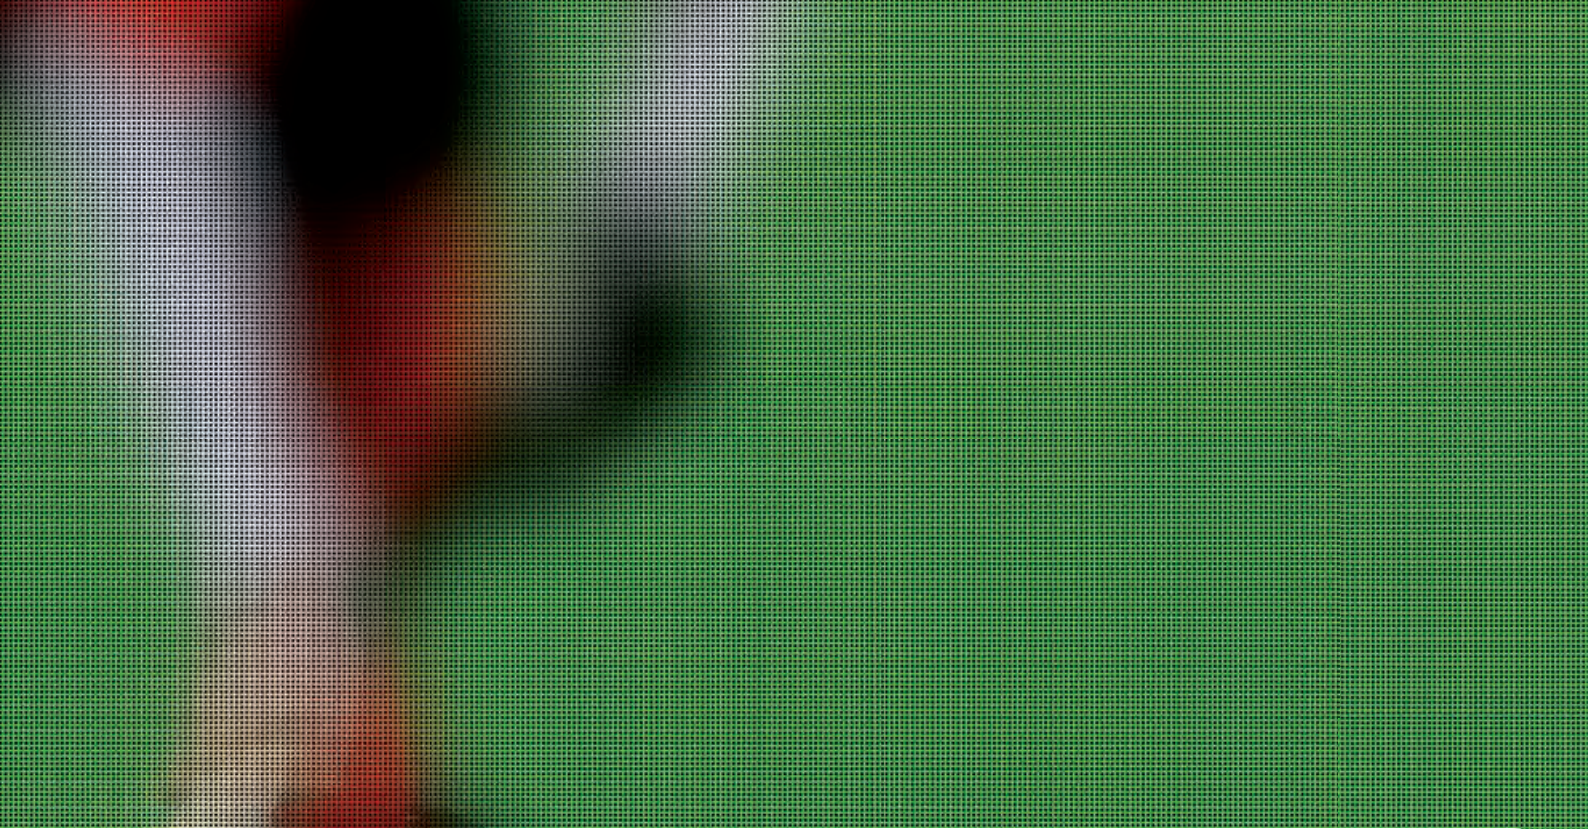

Profit in every way

ProPlay[®]

by Schmitz Foam Products

ProPlay®-Sport the new generation sport technical subbase, creates the perfect basis for a high quality artificial grass construction. The characteristics of ProPlay®-Sport address the demands for various specific sport technical requirements and can therefore be used for sports such as soccer, rugby, field hockey, American Football, Gaelic Games, Australian Football and korfbal.

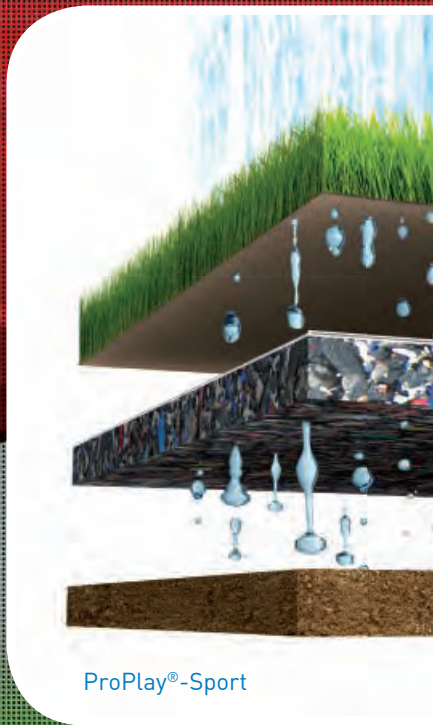

Safe and responsible

The unique properties of ProPlay®-Sport guarantee sport can be played in a safe and responsible way. For instance with regards to soccer; a superb energy restitution and optimal balance between physical over- and underload is eminent.

However for sports like rugby, American/Australian Football, Gaelic Games and korfbal, combined results on shock absorption and low deformation are the major elements. And in the case of field hockey an appropriate ball bounce is more important.

Playing in all weather conditions

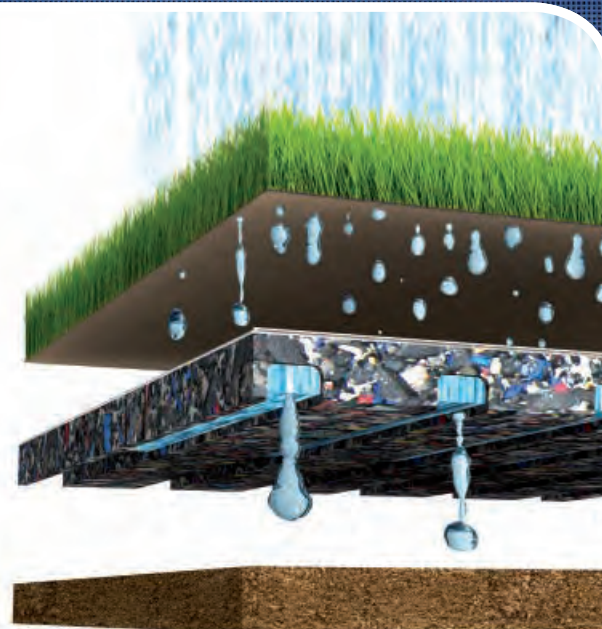

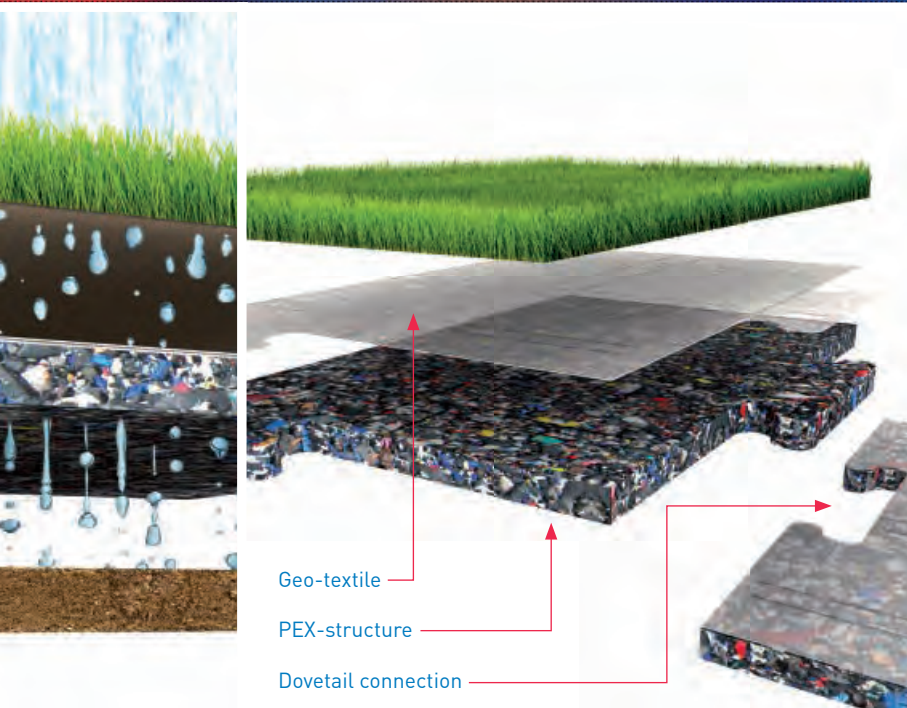

ProPlay®-Sport also excels because of the fact that playing characteristics stay on a constant level in all weather conditions. It can be played on in summer- and wintertime regardless of the climate, from the warm tropics to the cold Poles.

High quality base for
maximum sport enjoyment

ProPlay®
by Schmitz Foam Products

ProPlay®-SportD

In sport, standard solutions do not exist. Every sport has its own sport- and playing characteristics, therefore ProPlay®-Sport offers a unique solution for each sport and artificial grass system.

Stable, no wearing off and drainage capacities

ProPlay®-Sport is a sport technical underlayer which has been developed by Schmitz Foam Products through intensive research and stands out due to its unique properties: environmentally-friendly and sustainable products that feature excellent drainage, long term stability and wear off resistance.

Easy installation

ProPlay®-Sport panels are produced with a jigsaw structure and expansion slits so it can be installed in a fast and efficient way in all weather conditions.

Thanks to its firm and strong qualities it is also quite simple to mechanically install the grass or replace an old artificial lawn.

Vertical and horizontal drainage

ProPlay®-Sport has a very high vertical drainage and is suitable for use in drainage systems. However, there are situations where a horizontal drainage is required. For these situations we developed the ProPlay®-SportD with drainage channels. ProPlay®-SportD is more than a shock pad, it is a performance pad and combines excellent technical characteristics with a high vertical and a horizontal drainage.

Return on investment

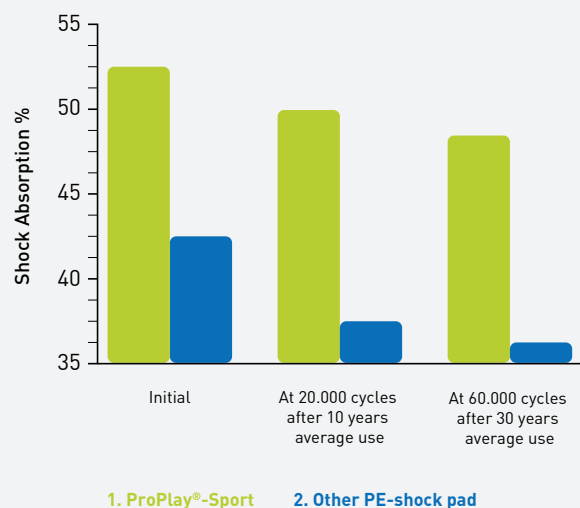

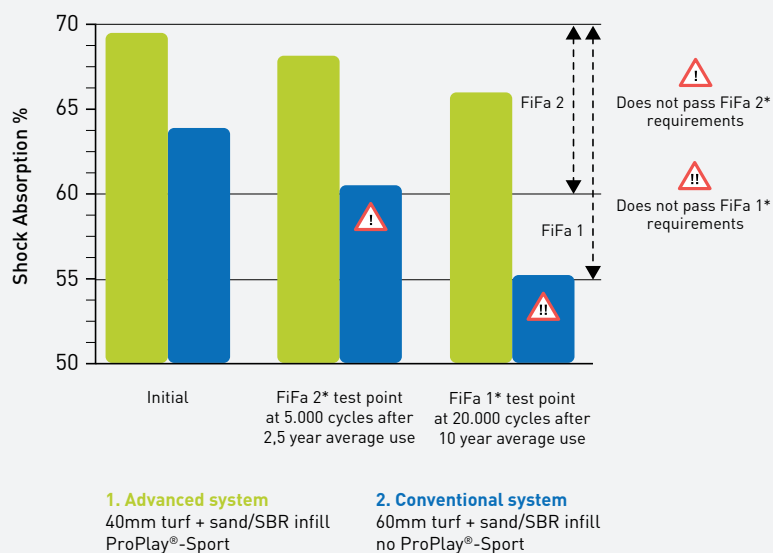

With a 25 year guarantee and a life expectancy of over 100 years ProPlay®-Sport has a higher return on investment than any other sport technical underlayer.

A large, ornate trophy is being held by a person's hands. The trophy has a dark, reflective body with a large, clear, spherical center. The person is also holding a black, rectangular foam product. The background is a blurred crowd of people.

Guarantee for
top performances

ProPlay[®]
by Schmitz Foam Products

ProPlay®-Sport has been perfected through a long time cycle of research and development by Schmitz Foam Products. Therefore ProPlay®-Sport has a number of remarkable advantages for both athletes and field operating managers

Constant sports characteristics

ProPlay®-Sport distinguishes itself with long time constant sporting characteristics. In comparison with other sport technical underlayers ProPlay®-Sport brings consistent results for vertical deformation and shock absorption for its complete lifecycle, regardless of the intensity of use.

Little impact on system in case of poor maintenance

Sport technical characteristics in conventional systems are highly determined by the infill.

Poor maintenance can lead to a reduction in these qualities and cause deterioration of the pitch resulting in various injuries and an increase in fatigue. Sport technical characteristics in an artificial grass system applied with ProPlay®-Sport are mainly determined by the shockpad. Therefore poor maintenance has little effect on ProPlay®-Sport based pitches.

Certified superb quality

ProPlay®-Sport meets the highest quality demands set by the professional sporting associations such as FIFA, FIH, GAA, AFL and IRB. Profound technical knowhow, an advanced production process and continuous ongoing product control at Schmitz Foam Products guarantee constant quality and set the international standard for present and future generations of sport fields.

Environmental awareness

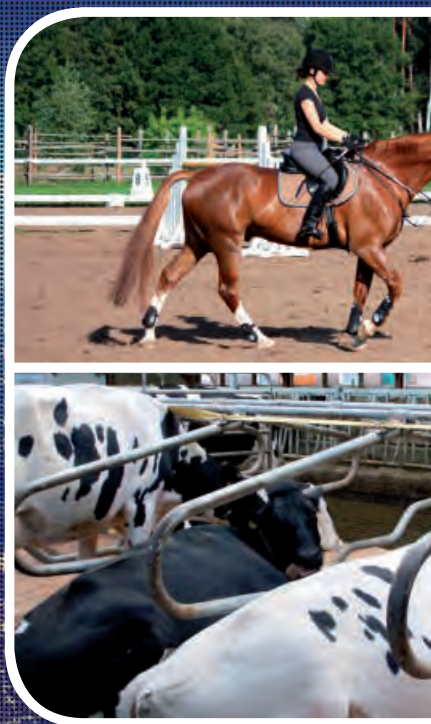

A keen eye for people and their environment

Although this has not been explicitly mentioned in the core values, attention to people and the environment is an essential characteristic of Schmitz Foam Products. Since 1990, the products have been manufactured in an automated, clean- production process and are made of closed-cell, cross-linked polyethylene (XPE) foam. The foam used for this purpose comes from the production and/or processing of new foam materials. This foam would otherwise have been disposed of or incinerated.

Durability is the norm at Schmitz Foam Products, due to:

- responsible use/recycling;
- production of durable and environmentally compatible products;
- manufacturing of products with a long service life;
- the use of closed-loop recycling.

World player
on top level

The number one worldwide

Schmitz Foam Products was established in 1935. Over the years, this organisation developed a great deal of flexibility and thus easily adapts to changing circumstances. Schmitz Foam Products has since grown into a leading international supplier of shock-absorption and drainage products.

Superior quality, service, innovation, flexibility and reliability are highly valued.

Research and development based on a knowledge of the market and its demands are the driving forces behind its balanced range of quality products. Schmitz Foam Products supplies its products worldwide. They are used in various market segments such as sports, fall protection, horticulture and civil engineering, as well as for cow mattresses and riding arenas.
